

SUPER CUSHION

SCREWDRIVER SET

This tool is suitable for working with long wood screws as the super cushion attains a high tightening force with little power.

The special grip is a gel-filled elastomer that provides elasticity when gripped. The layered cross-sectional structure reduces losses in torque transmission when fastening screws.

The shank is hardened chrome-vanadium steel with a black chrome plated finish.

High-precision magnetic tip.

The octagonal grip has no grooves. The soft touch won't tire out hands even after long hours of work.

This screwdriver is perfect in work where a large load is gradually applied on the palm, such as when working with long wood screws. Besides general applications, it can be used for professional applications including construction, electric, air-conditioning and water works.

Super Cushion Screwdriver, a product of persistent technological development
